

Let's Talk Antibiotics

**“Remember -
antibiotics don't work
on the viruses which
cause colds and flu”**

says Dr Penny Cillin

- *Antibiotics are used to treat bacterial infections - they don't work on the viruses which cause colds and flu.*
- *Over-use of antibiotics when we don't need them can mean they don't work as well when we do.*
- *You can get advice from your pharmacist on products to help treat colds, coughs and sore throats.*
- *If you are concerned about any symptoms - speak to your GP.*
